

ANDREW GREEN

Fort Lauderdale, FL | (561) 339-1806 | andrewgreen04@gmail.com | linkedin.com/in/agreen8

Professional Summary

Senior Power BI Engineer with 9+ years delivering enterprise BI solutions across the full reporting lifecycle — ETL pipeline development with Azure Data Factory and SQL Server through to semantic modeling, dashboard visualization, and performance optimization. Built and owned production Power BI environments at enterprise scale: 99% data accuracy on near-real-time multi-source pipelines, 25% reduction in SQL processing time, and executive dashboards used daily by operations and leadership. Deep Microsoft data stack specialist — Power BI, Azure Data Factory, SQL Server, Azure Synapse, SSIS — with a consistent track record of delivering trusted, governed reporting from complex, heterogeneous source environments.

Technical Skills

BI & Reporting: Power BI (Semantic Models, DAX, Power Query), Power BI Report Builder, SSRS (Paginated), Microsoft Fabric, Tableau

ETL & Orchestration: Azure Data Factory (ADF), SSIS, Azure Synapse Analytics, Microsoft Fabric Pipelines, Incremental Refresh

Databases: MS SQL Server, Azure SQL, T-SQL, Snowflake, Databricks, Oracle

Data Quality & Governance: Data Profiling, Validation & Reconciliation, KPI Definition, Data Lineage, Report Validation, UAT

Cloud & Tools: Microsoft Azure (Data Factory, Synapse, SQL Server, Data Lake), Git, Tabular Editor, DAX Studio

Languages: SQL, T-SQL, DAX, Python

Certifications (In Progress): PL-300 Power BI Data Analyst Associate; DP-203 Azure Data Engineer Associate

Professional Experience

Carnival Cruise Line — Senior Business Intelligence Developer

Remote • Jan 2025 – Present

- Automated ETL pipelines integrating heterogeneous data sources — SQL Server databases, IoT sensor feeds, vendor automation tags, and cloud APIs — into governed Azure Synapse reporting layers via **Azure Data Factory**, achieving 99% data accuracy for near-real-time Power BI reporting.
- Optimized **SQL Server**-based extraction, transformation, and validation logic for large-scale operational datasets, diagnosing production bottlenecks and reducing data processing time 25% while improving refresh performance.
- Designed scalable Power BI semantic models and dashboards delivering real-time KPI monitoring — operational targets, variance-to-target, and performance metrics — for engineering, operations, and executive audiences.
- Performed data quality validation, profiling, and reconciliation across raw source data, transformation layers, and Power BI outputs to ensure trusted, audit-ready metrics for operational and executive decisions.
- Maintained documentation for ETL logic, DAX measures, KPI definitions, and reporting standards to support data governance, knowledge transfer, and long-term maintainability.

Basic Fun! — Senior Business Intelligence Engineer

Boca Raton, FL • Mar 2023 – Jan 2025

- Architected the company's first enterprise data warehouse end to end — dimensional modeling, star schema, **Azure Data Factory** ETL pipelines, semantic layer, and Power BI dashboards — establishing a governed single source of truth for executive reporting.
- Built and maintained executive Power BI dashboards covering sales performance, budget tracking, inventory position, and forecast variance — contributing to a 20% improvement in Performance-to-Plan outcomes.
- Designed and deployed Azure data lake and **ADF** ETL pipelines ingesting third-party point-of-sale data from web portals, FTP, email, flat files, and external databases; implemented incremental refresh replacing full loads, significantly reducing pipeline run times.
- Built custom Python-based API integrations via **Azure Data Factory** calling the Amazon Selling Partner API and Walmart vendor API, parsing JSON payloads into a Microsoft Fabric Lakehouse — powering Power BI demand forecasting that improved forecast accuracy 25% YoY to 78%.

- Conducted ongoing data quality validation, reconciliation, and performance tuning across data warehouse tables, ETL jobs, semantic models, and dashboards to ensure executive trust in reported metrics.

Twin-Star International — Business Intelligence Engineer

Delray Beach, FL • Oct 2017 – Mar 2023

- Architected Twin-Star's first enterprise data warehouse: defined dimensional models, implemented star schema, built **SSIS** ETL packages, and leveraged Azure Synapse Analytics for parallel analytical processing.
- Led migration of on-premise **SQL Server** schemas to Azure SQL Server, migrating transactional data from multiple siloed ERP systems into a unified Azure SQL Server operational data store.
- Integrated general ledger data across three portfolio companies into a unified chart of accounts, automating P&L, Balance Sheet, and Cash Flow reporting — saving 20–25 hours/month in manual Finance team preparation.
- Built paginated SSRS/Power BI Report Builder reports for complex data exports; engineered a Power Apps write-back solution enabling commentary input within Power BI custom visuals.

AutoNation — Business Analyst

Palm Beach Gardens, FL • Apr 2016 – Oct 2017

- Built an automated Python tool to ingest and parse Vehicle Report PDFs, applying custom appraisal logic to calculate optimal bid prices and profit margins at auction.
- Designed SQL queries and advanced DAX measures for Power BI dashboards covering real-time KPI tracking, financial forecasting, sales performance, and inventory optimization.

Merrill Lynch — Financial Advisor

Palm Beach Gardens, FL • May 2011 – Mar 2016

- Junior partner on an advisory team managing \$250M in client assets; built foundational financial reporting expertise (P&L, Balance Sheet, Cash Flow) that directly informs current BI and data engineering work.

Education

Florida State University — Bachelor of Science, Finance & Economics
