

Andrew Green

Senior BI & Analytics Developer — Microsoft Fabric · Power BI Semantic Modeling · SQL · Python

Fort Lauderdale, FL (Boca-local / hybrid, ET) | 561.339.1806 | andrewgreen04@gmail.com | linkedin.com/in/agreen8

SUMMARY

Senior BI & Analytics Developer, 10+ years on the Microsoft data stack, working the seam between back-end data engineering and front-end reporting — building curated data models in SQL and Python across Microsoft Fabric (Lakehouse, notebooks, pipelines) and the Power BI semantic models on top. Three enterprise data warehouses built from scratch; production Fabric adopter with an FP&A/finance background. Known for 99% data accuracy, 25% faster processing, and Git-governed delivery.

TECHNICAL SKILLS

- **Microsoft Fabric:** Lakehouse & Warehouse, notebooks (transformation / enrichment / business logic), pipelines, Direct Lake, golden datasets, OneLake, REST API / TMDL
- **Power BI:** semantic / data modeling, DAX (calculation groups), Power Query / M, reusable models & clear metric definitions, SSRS
- **SQL & data engineering:** T-SQL (advanced querying, transformations, performance tuning), ETL, SSIS, Azure Data Factory & Synapse, incremental / watermark loads, refresh sequencing
- **Python & modeling:** Python (pandas, scikit-learn) for data transformation, dimensional modeling (star schema, fact / dimension, SCD), data validation & reconciliation
- **Governance & delivery:** Git / PBIP source control, peer review, naming & modeling standards, documentation, UAT
- **Certifications (in progress):** PL-300 Power BI Data Analyst · DP-700 Fabric Data Engineer · DP-203 Azure Data Engineer

EXPERIENCE

Business Intelligence Developer — Power BI Specialist (Contract/Consultant)

Carnival Cruise Line — Remote | Jan 2025–Present

- Bridge back-end data engineering and front-end reporting for the fleet HVAC energy platform — building curated data models in **SQL and Python** and the **Power BI semantic models** on top, across 79 ships and 8 brands.
- Build and maintain **Microsoft Fabric** notebooks and Lakehouse pipelines for transformation, enrichment, and business logic — ingesting IoT, cloud BMS, and on-prem SQL into a governed layer, with a **Direct Lake semantic model** for near-real-time reporting.
- Design semantic models with five **calculation groups**, reusable **DAX** measures, and clear, transparent **metric definitions** — enabling self-service and shifting stakeholders from static reporting to insight.
- Validate data outputs and business-rule alignment before models are surfaced — EXCEPT-keyed reconciliation across multi-million-row views — and own **refresh sequencing and dependencies** via staged loads in **Azure Synapse** (99% data accuracy).
- Work under **Git** (PBIP) with documented standards and naming conventions; tuned SQL for 25% faster processing and ~16x columnstore compression, testing changes before production.

Senior Business Intelligence Engineer (Power BI)

Basic Fun (consumer products / toys — CPG) — Boca Raton, FL | Mar 2023–Jan 2025

- Designed the company's first enterprise **data warehouse** end to end — dimensional models, star schema, semantic layer, and Power BI — plus **Microsoft Fabric** lakehouses publishing governed **golden datasets** reusable across reports.
- Built **Azure Data Lake** and Fabric ETL/transformation pipelines ingesting third-party point-of-sale data from web portal, FTP, email, and flat-file sources; replaced full loads with **incremental refresh** to improve data readiness.
- Partnered with Finance, Sales, and Demand Planning to translate business questions into governed KPI models — executive dashboards on sales, budget, forecast, inventory, and variance-to-plan contributing to a 20% improvement in Performance-to-Plan.

Senior Business Intelligence Engineer

Twin-Star International (consumer products, 3-company portfolio) — Delray Beach, FL | Oct 2017–Mar 2023

- Architected the company's first enterprise **data warehouse**: dimensional models, star schema, **SSIS** ETL packages, and Azure Synapse analytical processing.
- Automated **P&L, Balance Sheet, and Cash Flow** reporting across three portfolio companies on a unified chart of accounts — saving Finance 20–25 hours/month.
- Migrated on-premise **SQL Server** schemas and siloed ERP data to **Azure SQL** via ETL pipelines.

Earlier: Business Analyst, AutoNation (2016-2017) - advanced DAX measures and SQL-based sales & pricing analytics | Financial Advisor, Merrill Lynch (2009-2016) - co-managed \$250M in assets. **Education:** B.S., Finance & Economics, Florida State University.
